

Health Summary Report

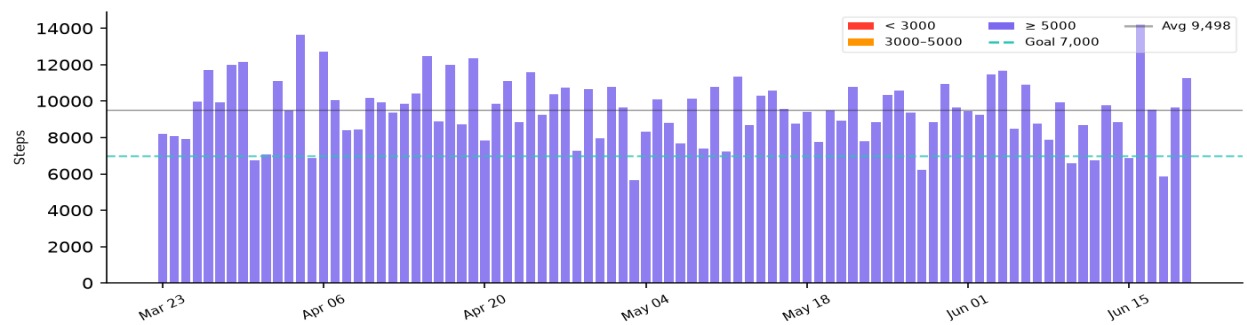

Alex Torres · DOB: 1997-03-22 · Sex: Male · Period: Mar 22, 2026 — Jun 21, 2026 · Generated: Jul 12, 2026

① Mobility

9,498	5.4 km/h	0.938	2.7
Avg daily steps	Walk speed	Steadiness (0–1)	Flights/day
77.9 cm	23.0 %	2.0 %	420 kcal
Step length	Double support	Gait asymmetry	Active cal/day

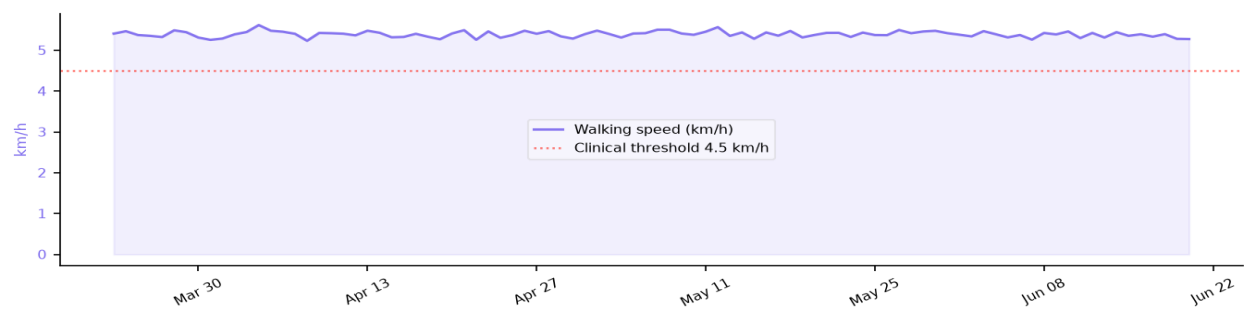

Daily step count

0 days under 3,000 steps and 0 days under 5,000 in the period.

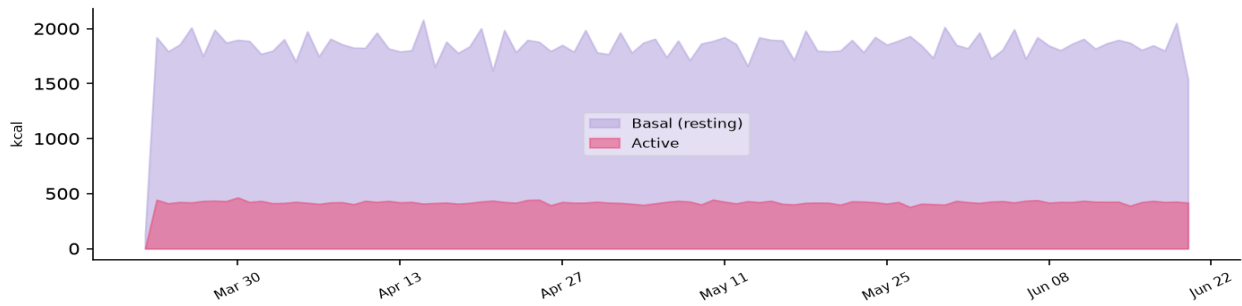

Walking speed and steadiness

Avg speed 5.4 km/h (clinical threshold 4.5 km/h). 0 days with very low speed.

Caloric expenditure

Active avg 420 kcal/day · Basal avg 1830 kcal/day.

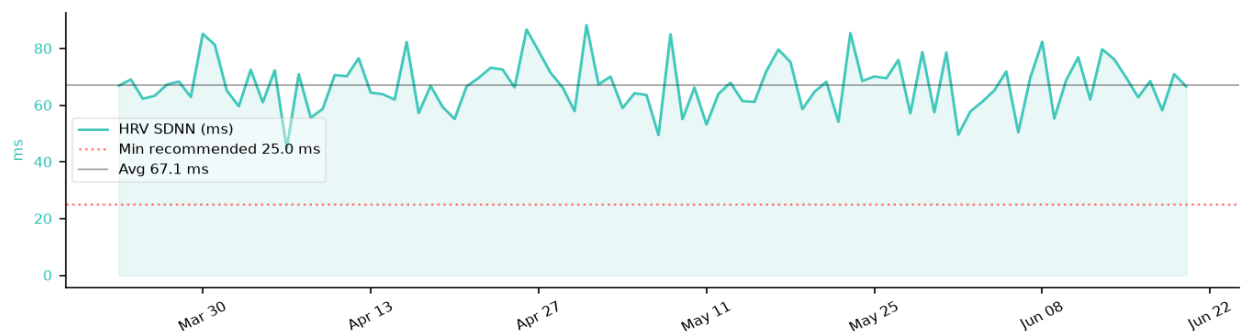

Metric	Value	Reference	Status
Avg daily steps	9,498	$\geq 7,000/\text{day}$	✓ OK
Walking speed	5.4 km/h	$\geq 4.5 \text{ km/h}$	✓ Normal
Walking steadiness	0.938	≥ 0.6	✓ OK
Gait asymmetry	2.0 %	$< 8\%$ (symmetric)	✓ OK
Active cal/day	420 kcal	200–400 kcal moderate	—

② Cardiovascular

51 bpm	67.1 ms	98.5 %	13.2 /min
Resting HR	HRV (SDNN)	SpO2	Resp rate
53.7 mL/min·kg	35.9 bpm	86.9 bpm	0.741 m/s
VO2 Max	HR Recovery 1min	Walking HR avg	Stair ascent

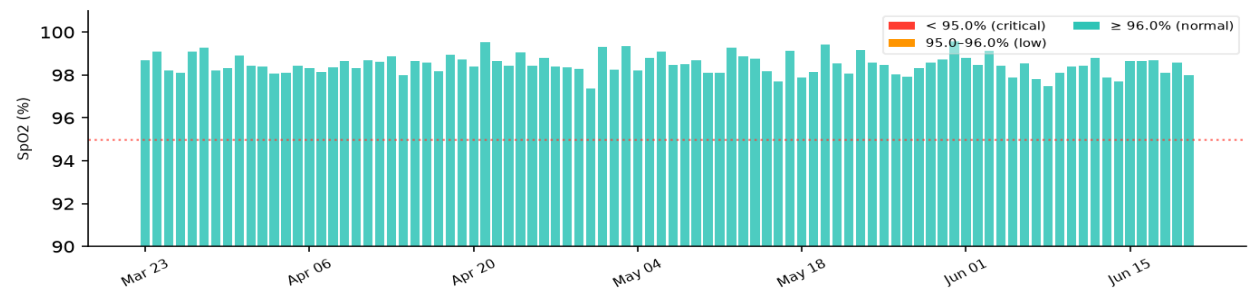

Resting heart rate and HRV

Avg resting HR 51 bpm · Avg HRV 67.1 ms. HRV below 25.0 ms is associated with reduced autonomic resilience.

Oxygen saturation (SpO2)

Avg SpO2 98.5%. Values below 96.0% require clinical evaluation.

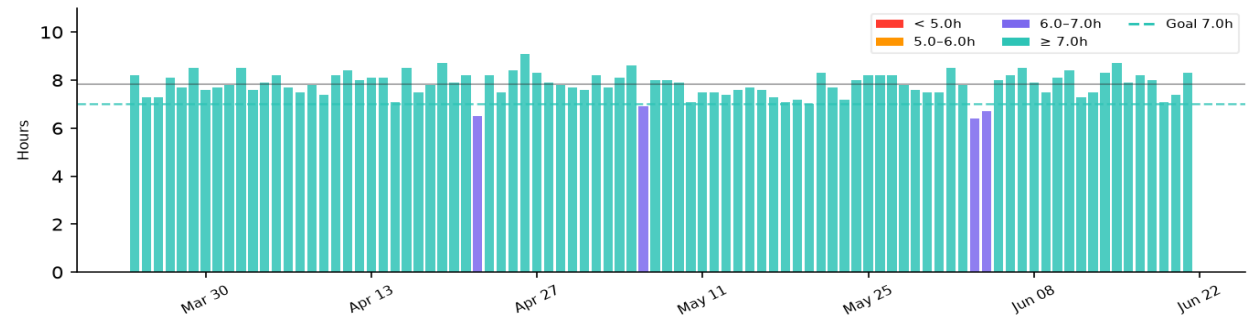

Metric	Value	Reference	Status
Resting HR	51 bpm	60–100 bpm	Abnormal
HRV (SDNN)	67.1 ms	> 25.0 ms recommended	✓ Normal
SpO2	98.5 %	≥ 96.0%	✓ Normal
VO2 Max	53.7 mL/min·kg	> 35 mL/min·kg	✓ OK
HR Recovery 1min	35.9 bpm	> 12 bpm (normal)	✓ Good

③ Sleep

7.8h	0	86	86
Avg sleep/night	Nights < 5.0h	Nights ≥ 7.0h	Days with data

Sleep duration per night

Avg 7.8 h/night. 0 nights under 5.0 h.

Metric	Value	Reference	Status
Avg sleep/night	7.8 h	7.0–8 h/night	✓ OK
Nights < 5.0h	0	< 5 nights/90 days	✓ OK
Nights ≥ 7.0h	86	> 60 nights/90 days	✓ Good

④ AI-Generated Summary

Here's the summary of the patient's health metrics:

1. PATIENT PROFILE

29-year-old male, data analyzed from March 22 to June 21, 2026 (92 days).

2. MOBILITY

The patient averaged 9498.53 steps/day, which is above the 7000-step goal and well above the 3000-step critical low, with a stable trend. There were no streaks below the threshold. Average walking speed was 5.39 km/h, above the 4.5 km/h clinical minimum and 3.5 km/h critical low, with a stable trend and no critical streaks. Steadiness averaged 0.938, above the 0.60 warning line. Gait asymmetry was 2.0%, and double support was 23.0%.

3. CARDIOVASCULAR

Cardiovascular data is available. Resting heart rate averaged 51.88 bpm, with a stable trend. Heart rate variability (HRV) averaged 67.15 ms, above the 25 ms minimum healthy threshold, with a stable trend and no critical streaks. SpO2 averaged 98.5%, above the 96% minimum and 95% critical thresholds, with a stable trend and no critical streaks. VO2 Max averaged 53.7, and HR recovery averaged 35.9.

4. SLEEP

Sleep data is available. The patient averaged 7.82 hours of sleep per night, meeting the 7-hour goal. There were no nights below the 5-hour minimum and 86 nights met the goal, with a stable trend.

5. OVERALL ASSESSMENT

For this 29-year-old male, mobility metrics are consistently above their respective thresholds, with daily steps well exceeding the goal and walking speed above the clinical minimum. Cardiovascular vitals, including HRV and SpO2, are above their healthy and critical thresholds. Sleep duration averages above the recommended goal. All tracked metrics show a stable trend over the analysis period. The absence of critical streaks for steps, speed, HRV, and SpO2 is notable.
