

Health Summary Report

Carlos Mendez · DOB: 1957-11-03 · Sex: Male · Period: Mar 22, 2026 — Jun 21, 2026 · Generated: Jul 12, 2026

Clinical alerts
■ Avg daily steps (3,572) below 7,000/day.
■ 31 days under 3,000 steps.
■ Walking speed (3.1 km/h) below 4.5 km/h — fall risk.
■ Walking steadiness (0.569) below 0.6.
■ Low HRV (21.5 ms) — reduced autonomic recovery.
■ SpO2 (95.5%) below 96.0% — monitoring advised.
■ Avg sleep (5.4 h) below recommended 7.0 h.
■ 27 nights under 5.0 h.

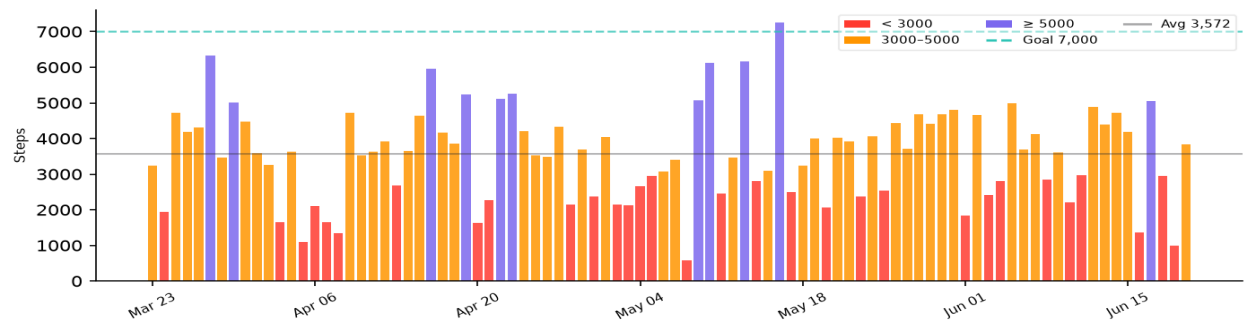

① Mobility

3,572	3.1 km/h	0.569	2.8
Avg daily steps	Walk speed	Steadiness (0–1)	Flights/day

48.6 cm	37.9 %	12.0 %	110 kcal
Step length	Double support	Gait asymmetry	Active cal/day

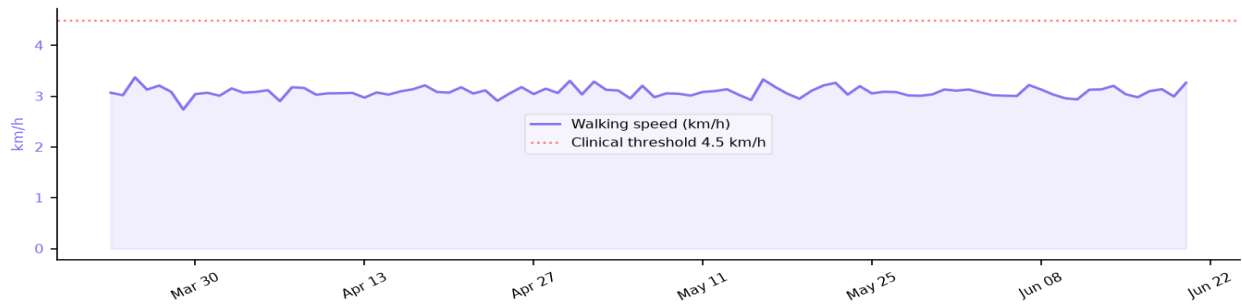

Daily step count

31 days under 3,000 steps and 79 days under 5,000 in the period.

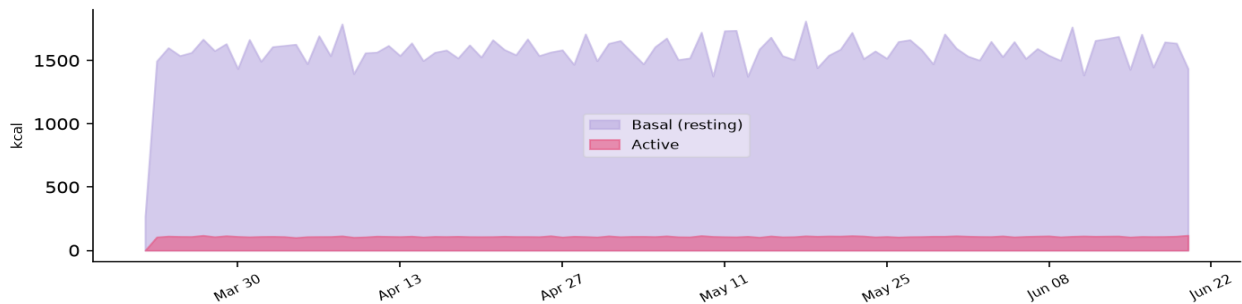

Walking speed and steadiness

Avg speed 3.1 km/h (clinical threshold 4.5 km/h). 90 days with very low speed.

Caloric expenditure

Active avg 110 kcal/day · Basal avg 1566 kcal/day.

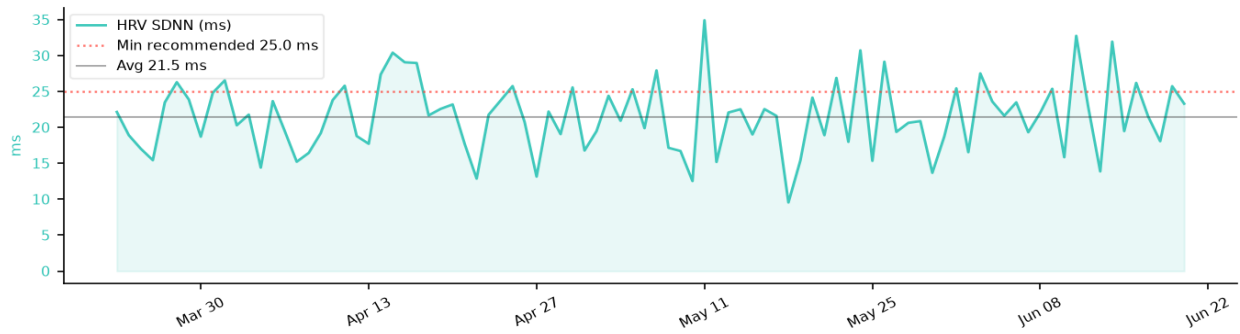

Metric	Value	Reference	Status
Avg daily steps	3,572	$\geq 7,000/\text{day}$	■ Below target
Walking speed	3.1 km/h	$\geq 4.5 \text{ km/h}$	■ Low — fall risk
Walking steadiness	0.569	≥ 0.6	■ Low
Gait asymmetry	12.0 %	$< 8\%$ (symmetric)	■ Asymmetric
Active cal/day	110 kcal	200–400 kcal moderate	—

② Cardiovascular

77 bpm	21.5 ms	95.5 %	18.0 /min
Resting HR	HRV (SDNN)	SpO2	Resp rate
24.8 mL/min·kg	14.6 bpm	109.0 bpm	0.279 m/s
VO2 Max	HR Recovery 1min	Walking HR avg	Stair ascent

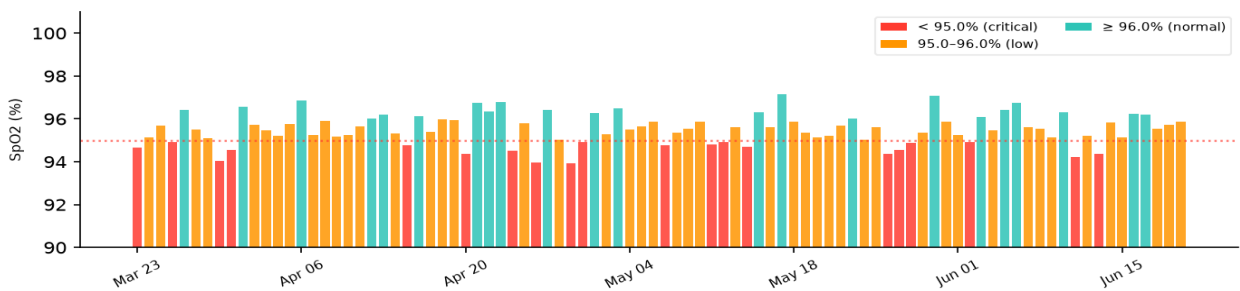

Resting heart rate and HRV

Avg resting HR 77 bpm · Avg HRV 21.5 ms. HRV below 25.0 ms is associated with reduced autonomic resilience.

Oxygen saturation (SpO2)

Avg SpO2 95.5%. Values below 96.0% require clinical evaluation.

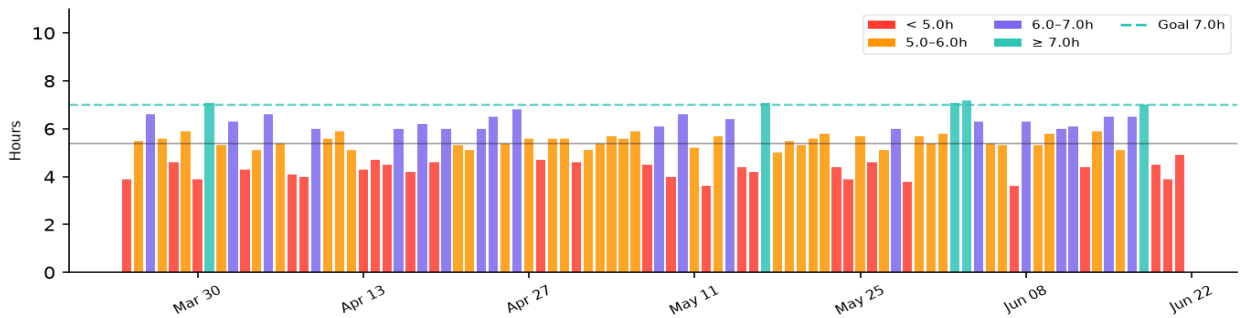

Metric	Value	Reference	Status
Resting HR	77 bpm	60–100 bpm	✓ Normal
HRV (SDNN)	21.5 ms	> 25.0 ms recommended	■ Low
SpO2	95.5 %	≥ 96.0%	■ Low
VO2 Max	24.8 mL/min·kg	> 35 mL/min·kg	■ Low cardio fitness
HR Recovery 1min	14.6 bpm	> 12 bpm (normal)	✓ Normal

③ Sleep

5.4h	27	5	32
Avg sleep/night	Nights < 5.0h	Nights ≥ 7.0h	Days with data

Sleep duration per night

Avg 5.4 h/night. 27 nights under 5.0 h.

Metric	Value	Reference	Status
Avg sleep/night	5.4 h	7.0–8 h/night	Below target
Nights < 5.0h	27	< 5 nights/90 days	Frequent
Nights ≥ 7.0h	5	> 60 nights/90 days	Low

④ AI-Generated Summary

Here's a summary of the patient's health metrics:

1. PATIENT PROFILE

68-year-old male, data analyzed from March 22 to June 21, 2026 (92 days).

2. MOBILITY

The patient's average steps were 3573, below the 7000 goal and slightly above the 3000 critical low threshold. There were 31 days below the critical low and 79 days below the mid-range threshold. Average walking speed was 3.09 km/h, below the 4.5 km/h goal and the 3.5 km/h critically low threshold, with 90 days recorded at slow speed. Steadiness averaged 0.569, below the 0.60 warning line. All mobility metrics show a stable trend, with a worst streak of 4 days below the step threshold.

3. CARDIOVASCULAR

Resting heart rate averaged 77 bpm, heart rate variability (HRV) was 21.53 ms, which is below the 25 ms healthy threshold, with a worst streak of 10 days below this threshold. Oxygen saturation (SpO2) averaged 95.52%, below the 96% healthy threshold and slightly above the 95% critical threshold, with a worst streak of 11 days below the critical threshold. VO2 Max was 24.8, and HR recovery was 14.6. All cardiovascular metrics show a stable trend.

4. SLEEP

The patient averaged 5.39 hours of sleep, which is above the 5-hour minimum but below the 7-hour goal. There were 27 nights below the minimum sleep threshold and 5 nights meeting the goal. Sleep duration trend was stable, with a worst streak of 3 days below the minimum.

5. OVERALL ASSESSMENT

This 68-year-old male patient's mobility metrics, including average steps and walking speed, are below their respective goals, with speed also below the critically low threshold for 90 days. Steadiness is below the warning line. Cardiovascular data shows HRV and SpO2 are below healthy thresholds, with SpO2 nearing critical levels and experiencing an 11-day streak below this threshold. Average sleep duration is above the minimum but falls short of the recommended goal. These consistent observations across several key health metrics warrant clinical follow-up.
